Contributions

Team members and their contributions, by module (see the module table below).

Member	Name	PRN	Contribution
1	Saksham Singh Sisodiya	1262242908	Core protocol and transfer engine: frame format, sender (work-stealing scheduler, retries, recovery), receiver (verification, resume), CLI, protocol and architecture documents
2	Parth Dande	1262242629	Network emulator (delay, jitter, rate limit, path kill, corruption), experiment runner and graphs, topology document, test report analysis
3	Anupria Gupta	1262241349	Wireshark dissector and captures, dashboard and web interface, demo script, viva preparation and study guide

Module split

Each person should be able to explain their modules in the viva using `docs/WALKTHROUGH.md`.

Suggested owner	Files	Why it is a good unit
Core protocol (member 1)	`mpft/protocol.py`, `sender.py`, `receiver.py`, `cli.py`, `docs/PROTOCOL.md`, `docs/ARCHITECTURE.md`	The heart of the project
Emulator and experiments (member 2)	`mpft/emulator.py`, `experiments/`, `docs/TOPOLOGY.md`, `results/`	Self-contained, produces the graphs
Wireshark, dashboard and docs (member 3)	`wireshark/`, `web/`, `mpft/status.py`, `docs/screenshots/`, `docs/TEST_REPORT.md`	Visual, easy to demonstrate

Git evidence

`git shortlog -sn` shows commits per author; each member should commit under their own identity (`git config user.name`, `git config user.email`).
